

1. Source code is a Eclipse Project
 - a. Open Eclipse,
 - b. File->Import
 - c. Main.java is located in default package

The application performs all queries online. Therefore, it takes some time for all given example images.

The application goes from the selected image two directories up, and compares the selected image with all images within these directories (incl. subdirectories). This suits to the given examples.

Therefore, it is necessary to not violate the data (folder) structure given in Task 1 and the root folder of the example packages has to be located directly within the project directory.
